Cover Your Assets

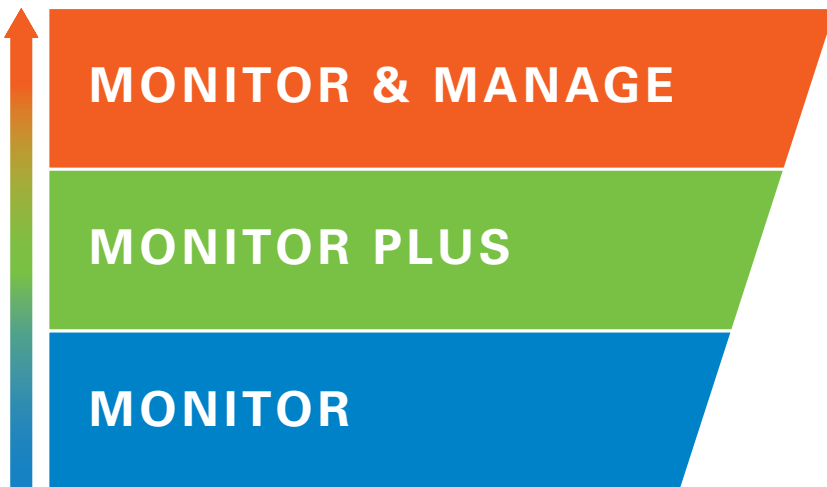

LET DONALDSON MANAGE YOUR DUST COLLECTION EQUIPMENT

Donaldson Industrial Filtration Services can monitor or fully manage your dust collection equipment so you and your maintenance team can focus on more critical issues within your operation.

Scalable service plans from Donaldson can help organizations ensure their dust collection equipment is operating at peak performance.

The basic Monitor plan provides end-users with remote monitoring, maintenance alerts, and live troubleshooting. Monitor Plus adds an inspection with a preventative maintenance visit, while the turnkey Monitor & Manage plan includes equipment monitoring and on-site service from a Donaldson-certified technician.

Service plans allow you to take on as much — or as little — of the system's management as you like. Donaldson can help provide plant professionals with the comfort that comes with knowing their equipment is functioning properly and the peace of mind that comes with knowing there's someone ready to help if it isn't.

All service plans include Donaldson's innovative iCue™ connected filtration monitoring technology. The technology works with any brand of collector and provides real-time operational insights and alerts.

iCue technology monitors collector performance and provides real-time insights.

Team of specialists quickly identifies and resolves equipment issues.

Network of certified service techs dispatched to address on-site collector needs.
