Fan Drive Filter

For Popular Skid Steer and Compact Track Loaders

Fan Drive Filters to Keep Your Cooling Systems Running

Cooling fan drive filters are used in a wide range of skid steers and compact track loaders. The cooling fan system is important because it maintains your engine operating temperature, avoids overheating and reduces excess wear. Clean fluid keeps this system functioning properly – and allows you to continue working in challenging environments.

Fan drive circuits include expensive pumps, drives, and control valves that need to be maintained in order to function properly. The Donaldson **P575347** fan drive filter continuously cleans fluid in the circuit to keep your cooling systems running smoothly and efficiently.

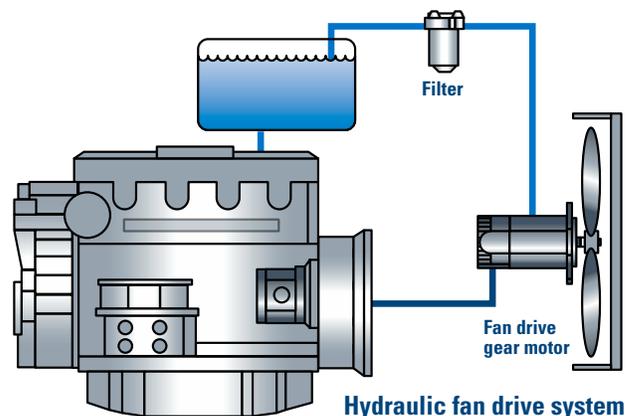

FEATURES

- **Proven media:** Multi-layered Synteq XP™ media that's optimized for efficiency, capacity and flow restriction.
- **Durability:** Double wire-backed pleated element design – for optimal pleat stability and support.
- **Validation:** Thorough performance testing, including by-pass pressure and valve flow rate, pressure loss, flow fatigue, efficiency, capacity and vibration durability.
- **Lower flow restriction:** Enhances filtration performance by reducing by-pass events in cold start situations. This means your cooling fan motor is less likely to experience filter by-pass that could result in hard particles by-passing the filter and damaging the motor and other critical components.

Service the fan drive filter every 1000 hours or annually as directed by the OE manufacturer's recommendations.
